

Edify CRM

Team walkthrough

What we built, where it lives, how to use it.

`crmadmin@gmail.com` · `https://digitaledify-agentic-crm-wpta.vercel.app`

What is this?

A CRM where AI agents do the work, advisors do the judgment.

- 6 AI agents handle outreach drafts, lead scoring, next-best-action, forecasting, and Q&A
- Every customer-facing AI output is held until a human approves it
- Multi-tenant, RLS-enforced, full audit trail
- Live in production today

The map

One product. Two surfaces. Permissions decide what each role sees.

Part 1 — The 6 agents

1. Outreach Agent

Drafts the next-best touch for a lead.

- Sees: lead profile, full timeline, last 3 touches, current rating
- Produces: subject + body
- **Always approval-gated** — sits in "Pending approvals" until a human clicks Approve & send

Outreach — example

SUBJECT: Quick check-in re: Python · Aug-2026 cohort

Hi Harsha,

Last we spoke you mentioned the Aug 2026 morning batch felt right for your schedule, and you wanted to clarify the EMI options before deciding. I dug into our finance terms – 6-month no-cost EMI is now available for the full ₹1.49L.

Want me to share the link?

– Priya

CITED: Lead activity · Program · Cohort

Notice: cited sources, no invented urgency, no fake discounts.

2. Lead Scoring Agent

Assigns a 0–100 score to every lead.

- Re-runs on every meaningful change (rating, demo attended, timeline event)
- Returns: score + ranked positive and negative signals
- Each signal is **explainable** — advisor can disagree

Scoring — example

SCORE 88 · Hot lead		
POSITIVE		
+ Visited pricing page in last 24h		+12
+ Replied to last touch within an hour		+9
+ Watched intro lesson 60%+		+8
+ Demo attended on 2026-06-10		+6
NEGATIVE		
- Hasn't asked about timeline yet		-4
- No referral in family / friends		-3

The score is the output. The signals are the *why*.

3. Next-Best-Action (NBA)

Tells the advisor what to do for this lead, right now.

- One action, with a confidence %, a why, and a one-tap execute
- Action types: Send email · Book demo · Apply EMI · Send payment link · Drip-only · Pause

NBA — example

LEAD

Karthik Nair (LEAD-9788)

ACTION

Send the EMI clarification email Priya drafted

CONFIDENCE

91 %

WHY

Lead is 'hot', has explicitly asked about EMI, and has not been touched in 38 hours. Hot leads not touched in 48h convert at 41 % the rate of those touched within 24h.

ONE-TAP

[Approve & send]

[Edit]

[Snooze 1d]

Open this every morning. Replaces the "where do I start?" mental scan.

4. Forecast Agent

This month's pipeline → enrolment forecast.

- Numbers from deterministic SQL
- Narrative from Claude
- LLM cannot change the numbers — only how to describe them

Forecast — example

AUGUST FORECAST

22 - 28 enrolments

Confirmed (paid)

14

High-confidence (hot)

8 ± 2

Stretch (warm + recent)

4 ± 4

NARRATIVE

Anchored by 14 paid registrations.
The 8 'hot' leads have above-average AI-track engagement;
expect 6 to close before cutoff (2026-08-05).
4 'warm' demo-attendees haven't replied in 5+ days –
treat as 50/50 without re-engagement.

5. Edify Chat Agent

The home-page assistant. Knows your whole tenant. Cites its sources.

- Reads leads, learners, tickets, batches, users, agent runs
- Persistent sessions (Claude-style sidebar + "New chat")
- Stop generating · edit-and-resend the latest prompt
- Inline citations to the surfaces it pulled from

Edify chat — example

You: How many hot leads do we have, and which ones are at risk?

Edify: 8 leads are currently 'hot' or 'superhot'.

Of these, 3 haven't been touched in over 48 hours:

- ◆ Karthik Nair (LEAD-9788) · 67h ago
- ◆ Priya Reddy (LEAD-9601) · 51h ago
- ◆ Arjun Bose (LEAD-9512) · 49h ago

Run the Outreach Agent on all three. NBA already has drafts for two of them under 'Pending approvals'.

CITED: /pipeline · /leads · /agents/runs · /approvals

6. The Approval Gate

Not an agent that talks. An agent that listens.

AGENT proposes → APPROVAL QUEUE → HUMAN approves OR REJECTS → Action fires (logged forever)

The line we won't cross. AI proposes. **Humans dispose.**

Every approval / rejection is recorded in the activity timeline.

Part 2 — The pages

Advisor surfaces

Page	What it does
/	Edify chat home — start here every morning
/leads	Filterable lead list with date filters
/pipeline	7-state kanban with drag-drop
/records/[number]	Click-to-edit lead record + agent runs
/timesheet	Free-form blocks, day/week/month viewer
/calendar	Day/Week/Month with mini-cal popover
/agents	Run agents on demand · approvals queue
/tickets	Support spine with categories + assignees
/learners	Converted leads with batch + course state

Admin surfaces

Page	What it does
/admin/users	Create users, assign groups + clients, reset pw
/admin/groups	Define permission groups
/admin/clients	CRUD clients, assign to employees
/admin/cohorts	Batches with trainer + co-trainer + days/times
/admin/courses , /admin/programs	Catalog management
/admin/timesheets	Pivot of every user × every day
/admin/reports/timesheets	User × Client × Day pivot · CSV export

The 7-state pipeline

new lead → attempted → cold → warm → hot → superhot → enrolled

- Drag a card across columns → rating updates · Lead Scoring re-runs · NBA regenerates
- Optimistic UI · rolls back on error
- Filters: name, number, program, rating, score, next follow-up, demo attended

Old "stages" (qual / demo / neg) are gone — rating is the single source of truth.

Lead record · the editable spine

Click any field to edit. Every change writes to the activity timeline with a diff.

LEAD DETAILS

- Email, Phone CC, Phone, Program, Source, Advisor
- **Price quoted** (₹, numbers-only)
- **Next follow-up date, Demo attended date**

Header strip: Rating · Lead # · Mode (online/offline/hybrid) · Time zone

Cards: Description · Payment trail · Agents on this lead

Part 3 — Two days in the life

Day in the life · Priya (advisor)

07:45 Login → home page Edify chat with sidebar of yesterday's chats
08:00 /pipeline → drag two warm leads to hot
08:15 ▶ Scoring re-runs · NBA regenerates · Outreach drafts new email
08:15 /records/LEAD-9788 → tweak the draft → Approve & send
09:30 /timesheet → log the morning's calls
10:00 Demo session for AI Aug-2026 batch (auto-shows on calendar)
12:30 /agents/edify → "Who attended a demo this week, no reply since?"
14:00 Lead replies → Scoring 78→91 · NBA suggests "Send payment link"
17:00 /timesheet review · mark tomorrow PM as half-day leave

She did 12 high-judgment actions. The agents handled ~40 in the background.

Day in the life · CRM Admin

09:00 Edify chat: "How did the team do this week vs last?"
▶ "178h vs 164h. Acme Corp +12h, Globex -4h. 8 new hot leads."
09:30 /admin/reports/timesheets → CSV export for invoicing
10:00 /admin/users → New user Anil, role advisor, clients [Globex, Acme]
▶ Anil signs in → /me/clients shows just those two
14:00 /admin/cohorts → New batch
Trainer: Priya · Co-trainer: Rahul · Days: M/W/F · 9-11am
▶ Sessions auto-populate on Priya's AND Rahul's calendars
16:30 /agents/forecast → August forecast 22-28 with narrative
17:00 Screenshot to founder. Done.

No spreadsheets. Every number traceable to a database row.

Part 4 — How it's built

The stack

Frontend	Next.js 15 (App Router) · React 19 · TypeScript Server Components for data, Client for state Tailwind for styling Anthropic SDK + AbortController for streaming UX
Backend	Express 4 + Drizzle ORM + node-postgres bcryptjs · opaque-token sessions in HttpOnly cookies RLS-enforced tenant isolation 24 idempotent SQL migrations
AI	Claude (via NVIDIA-hosted Anthropic endpoint) Deterministic-data + generative-narrative pattern Snapshot-validated outputs
Database	Azure Postgres (managed · PITR backups)
Deploy	Vercel (web) + Render (api) + Azure (db) Both git-watched. Push to main → live in 5 min.

The moat (in one slide)

- **RLS-enforced multi-tenancy** — app cannot leak data across tenants, even if there's a bug. Enforced at the DB.
- **Grounded agents** — every agent reads from real data, validates output against a snapshot, cites sources.
- **Real audit trail** — every change writes an activity row with diff + actor + payload.
- **One product, two surfaces** — advisor and admin share data, differ in permissions. Adding a "finance" role tomorrow is a permission change, not a rebuild.
- **Idempotent migrations** — safe to re-run on prod. New environments come up with one command.

What's live today

Auth · multi-tenant RLS · 7-state pipeline · drag-drop kanban · inline-edit lead records · phone CC + number split · time zone · delivery mode · price quoted (₹) · next follow-up + demo attended dates · payment trail · **6 AI agents** · approval queue · activity audit log · tickets · programs/courses/batches · trainer + co-trainer · calendar (D/W/M) · in-app meeting invites · free-form timesheets · self-marked leaves · client management · admin team-timesheet pivot · admin reports with CSV · learner spine.

24 features, all in production, all typecheck-clean.

Roadmap

Next 90 days

SMTP integration · in-app + email notifications · recurring calendar events · Forecast v2 with confidence intervals based on past accuracy

Next 6 months

WhatsApp channel agent · voice-call-summary agent · cohort-fill agent · self-serve tenant onboarding

Beyond

Marketplace of agents · cross-tenant analytics (anonymised) · outcome-based pricing

Part 5 — Demo path

5 tabs · 5 minutes · 5 wow moments

1. `/pipeline` — drag a lead from warm to hot. Watch the kanban update.
2. `/records/[id]` — click into the lead. Show inline edit + activity timeline.
3. `/agents/edify` — "Which leads should I prioritise today?" — citations arrive live.
4. `/agents/forecast` — show the August forecast. *"Numbers from SQL. Narrative from Claude."*
5. `/admin/timesheets` — pivot of the team's hours.

If you have 30 seconds: just show #3. The agent thinking + citing in real time is the demo.

Part 6 — How to use it (for the team)

Logging in

- URL: `https://digitaledify-agentic-crm-wpta.vercel.app`
- Use the email + password your admin gave you
- Forgot? Ping the CRM admin — they reset from `/admin/users`

Adding a new lead

`/leads` → `+ New lead` → fill name + phone + program → Save.
Lead Scoring runs immediately. NBA suggests a first action.

Changing a lead's rating

`/pipeline` → drag the card to the new column.
Or `/records/[number]` → click the rating chip in the header.

Logging time

- `/timesheet` → `+ Add block`
- Pick **client** (mandatory), set start + end, add a short note
- Default slot is "the next free hour after your last block"
- Edit anytime — Edit button on each row

If you forget for a few days: switch to Week or Month view, click any day, fill it in.

Marking leave

- `/timesheet` → `+ Mark leave` → date · type · half-day option
- Sick / Personal / Vacation / WFH / Holiday
- Admin sees it on `/admin/timesheets` immediately
- No approval flow yet — just transparency

Calendar + meetings

- `/calendar` → Day / Week / Month tabs
- Click any time slot → schedule a meeting
- Pick invitees (any active user) → they see RSVP buttons (Accept / Decline / Tentative)
- Active batches you teach auto-populate as sessions

Asking Edify

- `/` (home) or `/agents/edify`
- Ask anything in plain English — *"Which warm leads attended a demo this month?"*
- It cites the data sources it used
- Sessions persist; pick up old chats from the sidebar
- Stop a slow answer · edit-and-resend the last question

Part 7 — Operations

Deploy

```
GitHub (push to main)
├─→ Vercel (web/)    automatic, ~3 min
├─→ Render (api/)    automatic, ~3 min
    ↓
  Azure Postgres
```

Both watch `main`. Every push = a new deploy. Preview URLs on pull requests.

Adding a migration

1. Drop a `post-NNNN-name.sql` under `api/drizzle/`
2. Make it idempotent: `IF NOT EXISTS`, constraint guards, etc.
3. Push → Render rebuilds, **but doesn't auto-migrate**
4. Run `npm run db:migrate` from your machine or Render's Shell tab

The runner is safe to re-run — it skips what's already applied.

Day-2 ops cheatsheet

Need to...	Where
Reset a user password	/admin/users → row → Reset password
Deactivate a user	Same row → toggle
Add a client	/admin/clients → New client
Assign a client to a user	/admin/users → Edit → Clients section
Promote a co-trainer	/admin/cohorts → batch → swap
Rotate the AI key	Render → Environment → update + Manual Deploy
See logs	Render → Logs (api) · Vercel → Logs (web)

Roles + permissions (today)

Role	Default permissions
Administrators	Everything. Manage users, groups, clients, programs, batches. See all timesheets.
Advisors	Their own leads, pipeline, calendar, timesheet, agent runs.
Service rep	Tickets + everything advisors get.
Read-only	Read leads / reports, no writes.

Permissions are **not** the role tag. They flow from group membership. New role tomorrow = new group.

Part 8 — Q&A

Common questions

Q: Will the agents send emails on their own?

No. Every customer-facing AI output is held in `/approvals`. A human clicks Approve before anything fires.

Q: Can the agents see other tenants' data?

No. RLS enforces tenant isolation at the DB layer. The app role (`decrm_app`) cannot bypass it.

Q: What if Claude is down?

Agents fail gracefully — the page renders with a "service unavailable" state. The CRM stays usable.

Q: Is there a mobile app?

Not yet. The web app is responsive but not mobile-optimised. On the roadmap.

Thanks
